ELECTRIC EFFECT FIRE

Never before has an electric effect fire appeared as realistic as the unique flame effect by THE FLAME. Powered solely by electricity and Bio-Fluid (distilled water), special lighting and ultrasonic technology create an impressively authentic fire experience. Flame intensity can be individually adjusted, while a convenient remote control ensures effortless operation. The ultra-fine water mist released also helps improve the indoor climate.

STANDALONE FIRE FURNITURE

Standalone fire furniture with effect fire are fully assembled designer pieces that can be installed immediately without the need for built-in integration. Ready for instant use, they combine modern furniture design with a vivid, atmospheric flame effect to create a warm and inviting ambience. Designed purely for decorative purposes, they deliver the beauty of fire without real combustion, smoke, or sparks. Each model is available in various finishes, allowing form, materials, and colors to be tailored to individual spaces and personal style.

ENDLESS EFFECT FIRE

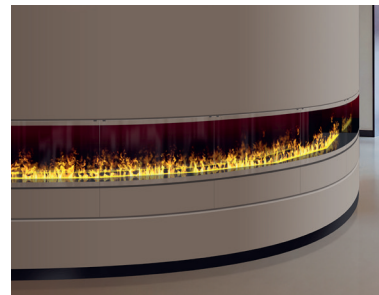

The Endless Effect Fire by THE FLAME enables continuous, customizable fire lines — straight or around corners. Starting at a length of 100 cm, the modular system can be flexibly expanded, opening up a wide range of design possibilities for diverse spatial concepts. The system is also prepared for the fully automatic Fluidmatic with O-Box filling system.

EFFECT FIRE HIP 50

The HIP 50 combines modern design with innovative effect fire technology, creating a deceptively realistic flame image using water mist, lighting, and ultrasonic technology — completely without heat. With a flame length of 50 cm, adjustable intensity, and flexible installation options, it is ideal for sophisticated residential and commercial spaces. Smoke-free, emission-free, and without heating output, it offers maximum design freedom with minimal installation effort.

MANUAL FILLING

Burn Time: 4–7 hours

Preparation (on-site):

- Flexible power cable with current line plug and power connection 230 V

Connection:

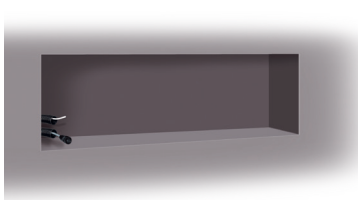

- Connection to the power supply

Manual filling:

- Open the control drawer, pull out the drawer, lift up the water tank, fill it with “BIO-FLUID”, reinsert the water tank. Push the drawer in.

FULLY AUTOMATIC FILLING

Preparation (on site):

- Osmosis water pipe from the O-Box (drawn in the empty conduit)
- Power and control cable (5 x 1.5 mm², drawn in empty conduit)

Connection:

- Connection to the power and control line
- Connection to osmosis water pipe

FLUIDMATIC

The automatic Fluidmatic filling system for effect burners provides enhanced convenience and safety. The fuel source is a permanently connected filtration and filling station — O-Box — including a reverse osmosis system, pump, timer, and various filters.

GAS FIRE

The latest gas fire innovations from THE FLAME deliver an exceptionally authentic fire experience. Advanced log burner technology, where flames emerge directly from the logs, creates a remarkably realistic flame image. Powered by natural gas or LPG, these gas fires combine the natural look of real fire with modern technology. For safe and efficient operation, THE FLAME also provides the matching balanced flue system (LAS).

PAGE 58 - 59

TERRACE FIRES

PAGE 60 - 63

OPEN GAS FIREPLACES

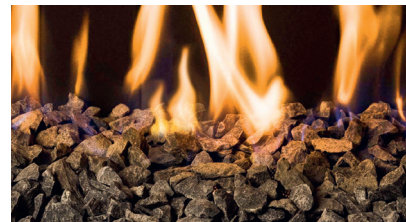

Open gas fireplaces provide a romantic, open flame experience and can be tailored to individual preferences. Combustion air is supplied either from the room or via a fresh air intake, while exhaust gases are vented through a conventional flue that should ideally be moisture-resistant.

CLOSED GAS FIREPLACES

Closed gas fireplaces offer a safe flame experience combined with efficient heating through warm air outlets (convection). The balanced flue system (concentric chimney) features a double-wall design that manages both exhaust gases and combustion air within a single system, allowing for room-sealed operation independent of indoor air.

FIRE PLACE

LAVA BROKEN

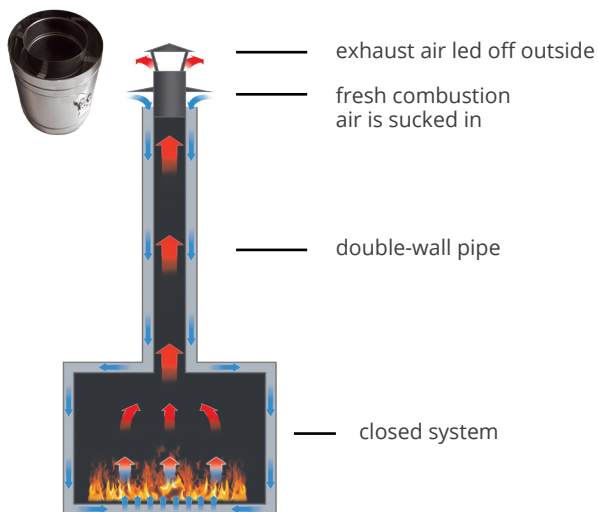

CERAMIC WOOD SET

SUPERGLOW

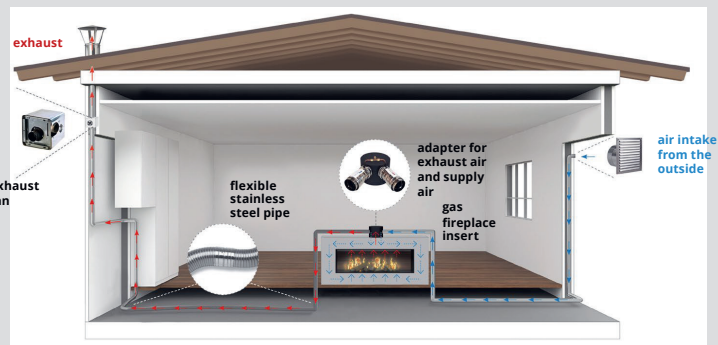

AIR FLUE SYSTEM – LAS

THE FLAME air flue system (LAS) is a concentric pipe system with two parallel airflow channels. Flue gases are safely discharged while combustion air is simultaneously supplied to the fireplace. This allows THE FLAME gas appliances to operate independently of room air and makes them suitable even for airtight buildings.

AIR FLUE SYSTEM – FAN-FLEX-FLUE

The fan-assisted flue system enables flexible routing of flue gas and combustion air lines – for example via floor, wall, or ceiling. An exhaust fan with integrated safety features ensures optimal chimney draft and the safe removal of flue gases. A minimum distance of 5 m from the gas fireplace insert must be maintained.

UNIQUE, INDIVIDUAL CONTROLS

- remote control
- wall switch
- timer
- clock timer
- motion sensor
- dimmer switch
- iBus and much more
- THE FLAME Gas-App

THE FLAME Gas-App - optional for controlling all gas appliances.

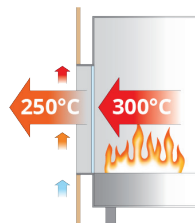

COOL DOWN

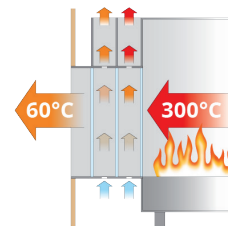

Gas fireplace inserts from THE FLAME are known for maximum comfort, enjoyment, and safety in both private and public spaces. We ensure that your fireplace is completely safe – without compromising on aesthetics. To reduce the risk of burns from closed gas fireplaces, we have developed the “COOL DOWN” system. Through an advanced double-glass system, the front panel is cooled by air circulation and the heat is dissipated. This allows the temperature of the glass to be reduced from approx. 250°C to around 60°C.

Without COOL DOWN
High glass temperature
approx. 250 °C – high
risk of injury!

With COOL DOWN
Touch protection
through reduced sur-
face temperature of
the glass thanks to
optimized front and
rear ventilation.

LOG-FIRE

LOG-FIRE represents state-of-the-art gas technology with directly fired log sets powered by up to 8 individual burners. Combined with LED lighting, an active ember bed and individually programmable fire scenes, it creates an exceptionally realistic and dynamic flame appearance.

Available as front-facing, two-sided or three-sided gas fireplace inserts (including U- and C-shape), LOG-FIRE offers maximum design flexibility for sophisticated interior concepts.

GAS BURNERS

Gas burners and gas boxes provide flexible, high-performance solutions for heat and ambiance in both indoor and outdoor settings. Suitable for natural gas or LPG, they can be used as built-in or stand-alone units. Manufactured from galvanized steel — or optionally stainless steel for outdoor use — they impress with durability, ease of operation, and modern design, including control system, remote control, and optional weather protection.

SMART HOME SYSTEM

Control via a smart home system is now one of the most popular ways to operate fire furniture. Integration is achieved through an interface in the receiver (gas fire) or directly via impulse control on the unit (effect fire). We are happy to provide guidance on programming, cable routing, and actuators — enabling fully automated and customized control.

PROGRAM MODE

Store up to 8 programs to automatically switch the fire-place on and off at specific times.

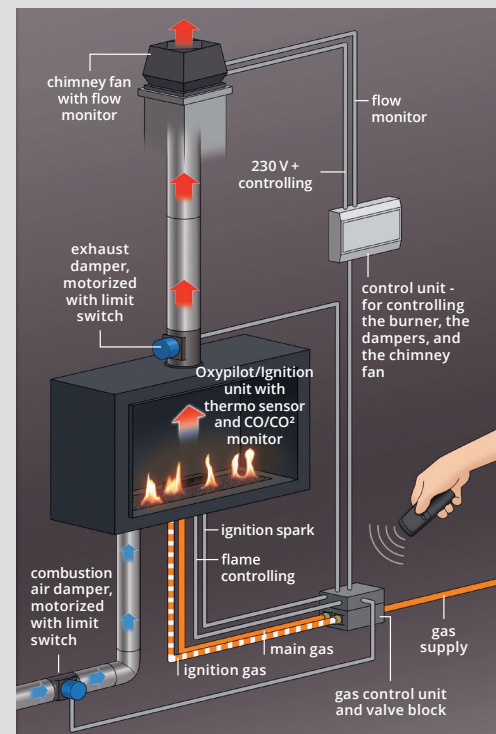

THERMOSTAT MODE

Automatically adjusts the flame to reach the selected temperature.

PREMIUM SAFETY SYSTEM

Sequence

1. Start via remote control, wall switch, or external signal (e.g., timer, sensors, bus systems).
2. Automatic opening of the combustion air and exhaust dampers until the limit switch confirms the end position.
3. Start of the exhaust fan once the airflow monitor detects the safe removal of flue gases.
4. Ignition of the pilot flame with continuous monitoring of the flame and air quality (OxyPilot).
5. Activation and start of the main burner by opening the gas supply.

GAS FIRE BENCH GAS FIRE TABLE

Our gas fire tables and benches combine elegant design with state-of-the-art technology. Suitable for natural gas or LPG, they offer safe and easy flame control via remote control. High-quality materials, customizable heights, and decorative elements such as stones, wood, or glass create a welcoming outdoor ambiance. Ideal for gardens, terraces, and hospitality settings — perfect for relaxed evenings around the fire.

ETHANOL FIRE

With THE FLAME you can create spaces for relaxation and well-being. Open flames and a pleasant indoor climate invite you to unwind and enjoy the moment. THE FLAME fire furniture is suitable for all living areas and easy to use - simply set it up, fill it with fuel, ignite and enjoy the fire. BIO-FUEL Indoor, a liquid alcohol-based fuel made from renewable resources, burns smoke-free and without residue, producing warm air (1.5–2.9 kW). No wood chopping, sparks, soot or ash — just pure fire atmosphere.

Stability:

All THE FLAME fire furniture is tested for stability. Devices are never mounted on rollers, and torches are fixed or equipped with tilt and splash protection.

Ventilation:

Vertical airflow from bottom to top ensures clean combustion, a beautiful flame pattern and maximum safety. Hot vapors are directed upward, significantly reducing the risk of injury.

Contact Protection Glass:

Protective glass prevents direct contact with hot components — for greater safety for both children and adults.

Double Glazing:

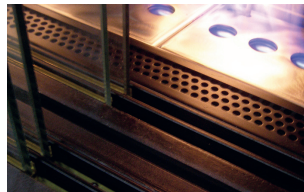

Ventilated double glazing in built-in appliances significantly reduces the risk of burns from hot glass surfaces (optional).

DURCHLÜFTUNG

BERÜHRUNGSSCHUTZGLAS

DOPPELVERGLASUNG

FILLING - IGNITING - REGULATING

1. Bottling:

A discharge cock is available for safe fuel handling.

2. Filling:

A filling container matched to the burner capacity helps prevent over-filling.

3. Ignition:

An ignition hook ensures safe lighting.

4. Regulation:

All Free-Flame burners and band burners are adjustable.

04

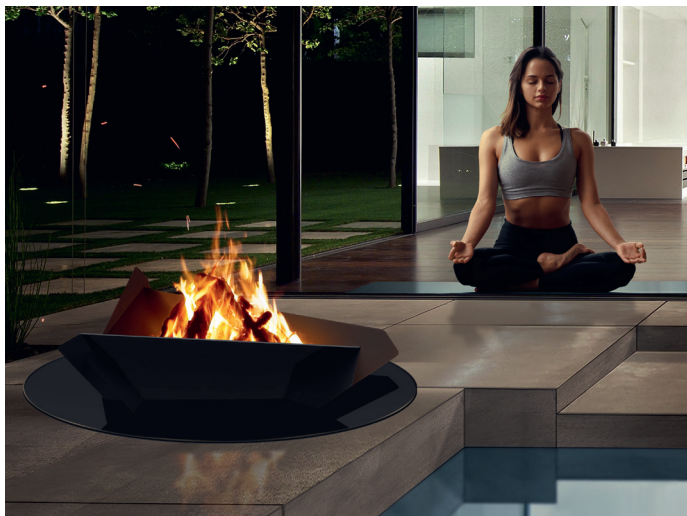

WOOD FIRE

Wood fire from THE FLAME stands for authentic warmth, lively flames, and the atmosphere of a real campfire. The natural play of fire creates a distinctive ambiance and transforms outdoor areas into places of gathering and relaxation. The fire bowls and fire features combine clean design with durable craftsmanship and are designed for use in gardens, on terraces, or in commercial settings. The result is an atmospheric fire experience that unites naturalness, aesthetics, and quality.
