EFFECT FIRE

ELECTRIC EFFECT FIRE

Never before has an electric effect fire appeared as realistic as the unique flame effect by THE FLAME. Powered solely by electricity and Bio-Fluid (distilled water), special lighting and ultrasonic technology create an impressively authentic fire experience. Flame intensity can be individually adjusted, while a convenient remote control ensures effortless operation. The ultra-fine water mist released also helps improve the indoor climate.

STANDALONE FIREPLACE

Standalone fireplaces with effect fire are fully assembled designer furniture that can be installed immediately without the need for built-in integration. Ready for instant use, it combines modern furniture design with a vivid, atmospheric flame effect to create a warm and inviting ambiance. Designed purely for decorative purposes, they delivers the beauty of fire without real combustion, smoke, or sparks.
Each model is available in various finishes, allowing its form, materials, and colors to be tailored to individual spaces and personal styles.

ENDLESS EFFECT FIRE

The Endless Effect Fire by THE FLAME enables continuous and individually customizable fire lines – whether straight or around corners. Starting from a length of 100 cm, the modular elements can be flexibly extended, offering countless design possibilities for a wide variety of interior concepts. In addition, the fire system is already prepared for the fully automatic Fluidmatic filling system with O-BOX. The new "Endless Fire Box" is available in the following sizes: lengths of 130, 180, 230, 280, 330, 380, 430, 480, and 530 cm – Endless! Available versions include front-facing models, tunnel fireplaces, 2-sided, 3-sided visible versions in C shape or U shape, as well as fully 4-sided designs.

ENDLESS FIRE BOX – AIRFLOW TECHNOLOGY

STRUCTURAL REQUIREMENTS
Flange for wall cladding: 4.5 cm
- Air supply (from the sides, top, and bottom) must be ensured

REQUIRED AIR CIRCULATION

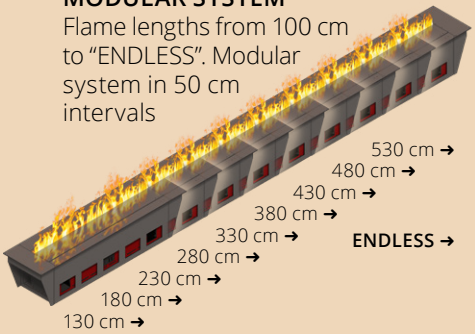

ONE FIRE. ANY LENGTH.
The ENDLESS FIRE BOX starts with a 130 cm base module (100 cm flame band) and can be extended in 50 cm increments using identical modules – without visible interruption. This creates a continuous flame image from 100 cm to theoretically endless lengths.

ENDLESS FIRE BOX TOP

All Endless burners are also available as a top version. The continuous flame band creates a particularly striking fire effect, while all top units are conveniently operated from above. Decorative elements can only be used to a limited extent and should not interfere with the flame effect.

MODULAR SYSTEM

EFFECT FIRE HIP 50

The HIP 50 combines modern design with innovative effect fire technology, creating a deceptively realistic flame image using water mist, lighting, and ultrasonic technology – completely without heat. With a flame length of 50 cm, adjustable intensity, and flexible installation options, it is ideal for sophisticated residential and commercial spaces. Smoke-free, emission-free, and without heating output, it offers maximum design freedom with minimal installation effort.

FILLING

MANUAL FILLING

• Burn Time: 4–7 hours

PREPARATION (ON-SITE):
• Flexible power cable with current line plug and power connection 230 V

CONNECTION:
• Connection to the power supply

MANUAL FILLING:
• Open the control drawer, pull out the drawer, lift up the water tank, fill it with "BIO-FLUID", reinsert the water tank. Push the drawer in.

AUTOMATIC FILLING SYSTEM

O-BOX READY

PREPARATION (ON-SITE):
• Osmosis water pipe from the O-Box (drawn in the empty conduit)
• Power and control cable (5 x 1.5 mm², drawn in empty conduit)

CONNECTION:
• Connection to the power and control line
• Connection to osmosis water pipe

FLUIDMATIC

The automatic Fluidmatic filling system for effect burners provides enhanced convenience and safety. The fuel source is a permanently connected filtration and filling station - O-Box - including a reverse osmosis system, pump, timer, and various filters.

- DIRECT WATER CONNECTION
- TIMER
- REMOTE CONTROL
- REVERSE OSMOSIS
- NO BURN RISK
- SEDIMENT FILTER
- BACTERIA FILTER
- ODOR FILTER
- LEAKAGE MONITORING
- BRILLIANT

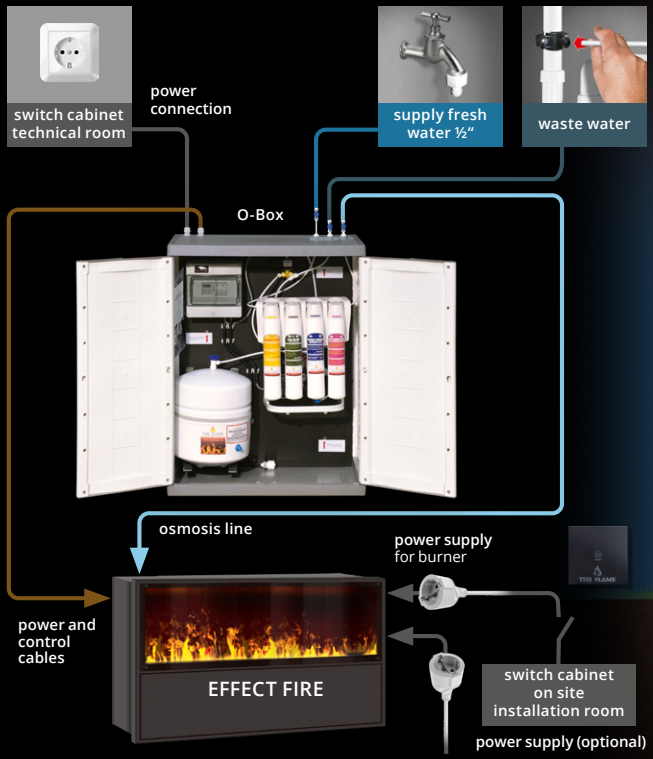

TO BE PREPARED ON-SITE FOR O-BOX:
• Fresh water supply line
• Wastewater drain
• Power connection 230 V. The mains control cable and the osmosis line (Bio-Fluid line) of the Endless Fire Box are connected to the O-Box.

IDENTIFIES ALL BUILT-IN MODULES THAT ARE PREPARED FOR FULLY AUTOMATIC FILLING!

GAS

DECORATIVE GAS FIRE

The latest gas fire innovations from THE FLAME deliver an exceptionally authentic fire experience. Advanced log burner technology, where flames emerge directly from the logs, creates a remarkably realistic flame image. Powered by natural gas or LPG, these gas fires combine the natural look of real fire with modern technology. For safe and efficient operation, THE FLAME also provides the matching balanced flue system (LAS).

PAGE 53 - 55

OUTDOOR FIRE
PAGE 56 - 57

OPEN GAS FIRE INSERTS

Open gas Fire Inserts provide a romantic, open flame experience and can be tailored to individual preferences. Combustion air is supplied either from the room or via a fresh air intake, while exhaust gases are vented through a conventional flue that should ideally be moisture-resistant.

DIRECT-VENT GAS FIRE INSERTS

Direct-Vent Gas Fire Inserts offer a safe flame experience combined with efficient heating through warm air outlets (convection). The balanced flue system (concentric chimney) features a double-wall design that manages both exhaust gases and combustion air within a single system, allowing for room-sealed operation independent of indoor air.

COMBUSTION CHAMBER

LAVA BROKEN

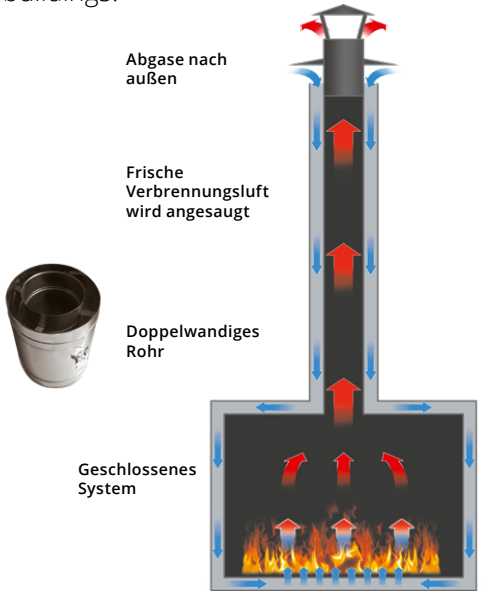

CERAMIC WOOD SET

SUPERGLOW

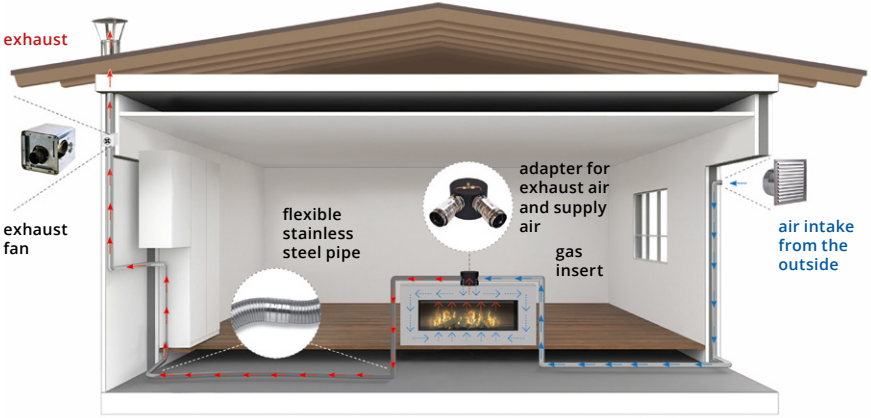

AIR FLUE SYSTEM – LAS

THE FLAME air flue system (LAS) is a concentric pipe system with two parallel airflow channels. Flue gases are safely discharged while combustion air is simultaneously supplied to the Insert. This allows THE FLAME gas appliances to operate independently of room air and makes them suitable even for airtight buildings.

AIR FLUE SYSTEM – FAN-FLEX-FLUE

The fan-assisted flue system enables flexible routing of flue gas and combustion air lines – for example via floor, wall, or ceiling. An exhaust fan with integrated safety features ensures optimal chimney draft and the safe removal of flue gases. A minimum distance of 5 m from the gas fireplace insert must be maintained.

UNIQUE, INDIVIDUAL CONTROLS

- REMOTE CONTROL
- WALL SWITCH
- TIMER
- CLOCK TIMER
- MOTION SENSOR
- DIMMER SWITCH
- IBUS AND MUCH MORE
- THE FLAME GAS-APP

THE FLAME Gas-App - optional for controlling all gas appliances.

COOL DOWN

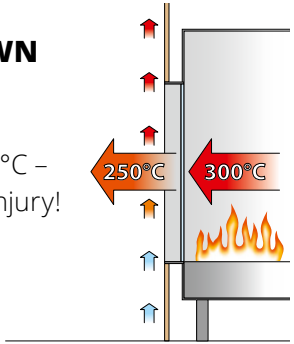

Decorative Gas Fire inserts from THE FLAME are known for maximum comfort, enjoyment, and safety in both private and public spaces. We ensure that your fire is completely safe - without compromising on aesthetics. To reduce the risk of burns from closed gas fireplaces, we have developed the "COOL DOWN" system. Through an advanced double-glass system, the front panel is cooled by air circulation and the heat is dissipated. This allows the temperature of the glass to be reduced from approx. 250°C to around 60°C.

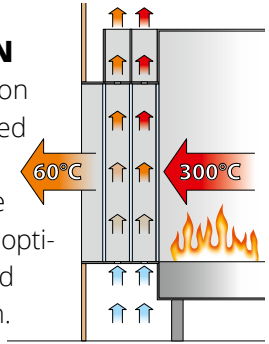

WITHOUT COOL DOWN

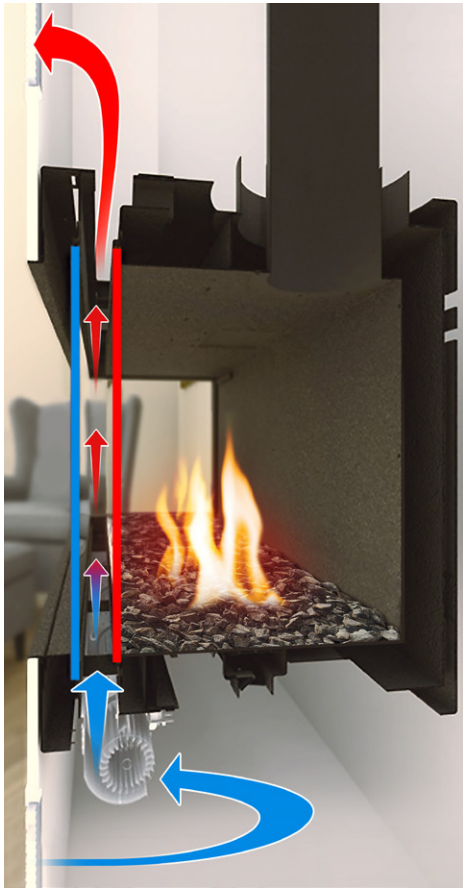

High glass temperature approx. 250 °C – high risk of injury!

WITH COOL DOWN

Touch protection through reduced surface temperature of the glass thanks to optimized front and rear ventilation.

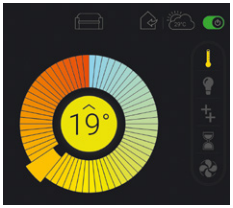

SMART HOME SYSTEM

Control via a smart home system is now one of the most popular ways to operate a fireplace. Integration is achieved through an interface in the receiver (gas fire) or directly via impulse control on the unit (effect fire). We are happy to provide guidance on programming, cable routing, and actuators - enabling fully automated and customized control.

PROGRAM MODE

Store up to 8 programs to automatically switch the fireplace on and off at specific times.

TEMPERATURE MODE

Automatically adjusts the flame to reach the selected temperature.

PREMIUM SAFETY SYSTEM

Sequence

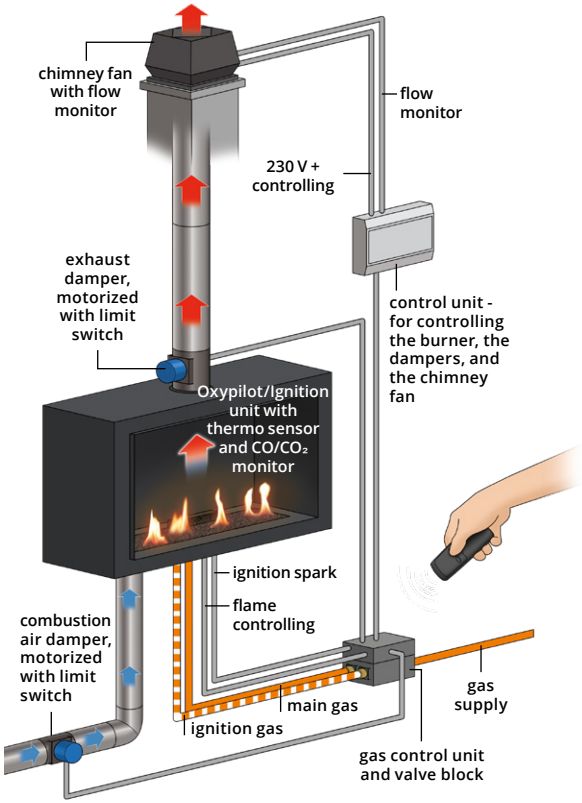

1. Start via remote control, wall switch, or external signal (e.g., timer, sensors, bus systems).

2. Automatic opening of the combustion air and exhaust dampers until the limit switch confirms the end position.

3. Start of the exhaust fan once the airflow monitor detects the safe removal of flue gases.

4. Ignition of the pilot flame with continuous monitoring of the flame and air quality (OxyPilot).

5. Activation and start of the main burner by opening the gas supply.

DIRECT-VENT GAS FIRE INSERTS

The Classic Direct-Vent Gas Fire Inserts from THE FLAME operate with natural gas or LPG and offer versatile installation possibilities. Various sizes up to 7 m as well as multiple viewing options (front, tunnel, 2- or 3-sided) enable customized solutions. The matching air flue system (LAS) is available.

ETHANOL

ETHANOL FIRE

With THE FLAME you can create spaces for relaxation and well-being. Open flames and a pleasant indoor climate invite you to unwind and enjoy the moment.

THE FLAME fireplace is suitable for all living areas and easy to use - simply set it up, fill it with fuel, ignite and enjoy the fire.

BIO-FUEL Indoor, a liquid alcohol-based fuel made from renewable resources, burns smoke-free and without residue, producing warm air (1.5–2.9 kW). No wood chopping, sparks, soot or ash - just pure fire atmosphere.

SAFETY & BURNERS

STABILITY:
All fireplaces from THE FLAME have been tested for stability. The units are not mounted on casters, and the torches are either fixed in place or equipped with swivel guards or splash guards.

VENTILATION:
The vertical airflow from bottom to top ensures clean combustion, an attractive flame pattern, and maximum safety. Hot vapors are directed upward, virtually eliminating the risk of injury.

PROTECTIVE SAFETY GLASS:
Protective safety glass prevents direct contact with hot components - for greater safety for both children and adults.

DOUBLE GLAZING:
The double, ventilated glazing used in built-in units significantly reduces the risk of burns from hot glass surfaces (optional).

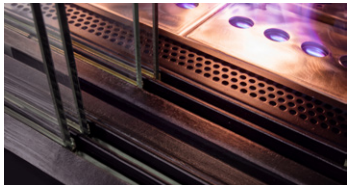

SAFETY

VENTILATION

PROTECTIVE SAFETY GLASS

DOUBLE GLAZING

FILLING - IGNITING - REGULATING

BOTTLING:
A discharge cock is available for safe fuel handling.

FILLING:
A filling container matched to the burner capacity helps prevent overfilling.

IGNITION:
An ignition hook ensures safe lighting.

REGULATION:
All Free-Flame burners and band burners are adjustable.

BRENNER

THE FLAME ethanol burners are the heart of every fire solution, creating a warm and natural atmosphere with a vivid flame pattern - without the need for a chimney.
The fireplace is easy to set up and operate. Powered by BIO-FUEL Indoor, a renewable liquid fuel that burns without producing smoke or residue, different burner types and sizes offer flexible design options - from compact single units to wide flame bands.

WOOD

WOOD FIRE

Wood-burning fires by THE FLAME embody authentic warmth, dancing flames, and the atmosphere of a real campfire. The natural movement of the flames creates a distinctive ambiance, transforming outdoor spaces into inviting places for gathering and relaxation. Our fire bowls and fire features combine clean design with durable craftsmanship and are designed for use in gardens, on terraces, and in commercial settings. The result is an atmospheric fire experience that brings together authenticity, aesthetics, and quality.

EFFECT FIRE

- Realistic flame effect created by illuminated water mist
- No smoke, soot, or flying sparks
- Minimal risk of fire and burns
- No chimney or elaborate exhaust system required
- Flexible use in indoor spaces
- Easy operation and installation
- Improves indoor humidity

GAS FIRE

- Instant, even heat
- Convenient operation, often via remote control or thermostat
- Minimal ash, soot, and cleaning required
- Adjustable flames and heat output

ETHANOL FIRE

- Real flame without a chimney or permanent flue
- Relatively simple and flexible installation
- Less soot and smoke
- Pleasant supplementary heat
- Bioethanol can be produced from renewable resources

WOOD FIRE

- Pleasant, natural warmth and a cozy atmosphere
- Renewable resource - when sourced from sustainable forestry
- Can be sourced locally, resulting in shorter transport distances
- Firewood can be stored for relatively long periods
